

One of the main financial recommendations would be obtaining government funding to fund the initial capital expenditure and extending this financial assistance to the modular islands' operational expenditures. Other recommendations include decreasing the module cost by at least 30%, by applying a discount rate to the construction costs.

It can be seen throughout this report, that the priorities of the programme are met by Space@Sea. Figure 6-1 shows that a milestone was reached: model testing was conducted in the last week of August 2020 at MARIN, showing the dedication of the partners towards this project. A positive outcome of the model testing was that the mooring system design was completed.
